

# Specialized Needs of Growing Large and Giant Breed Puppies

## Traditional Puppy Food

## TLC Whole Life Dog Food (All Life Stages)

Often high-calorie formulas promote rapid growth which can cause health complications for large breed puppies.

### Calorie Control & Balanced Protein

Includes a balance of 1.6:1 (DMB\*) protein to fat supporting growth and energy but avoiding excess calories.

Typically lack the required calcium-to-phosphorus ratio, potentially leading to issues like hip dysplasia.

### Balanced Mineral Content

Balanced calcium-to-phosphorus ratio of (1.4:1 DMB\*) supporting optimal growth of large breed puppies.

Frequently lack nutrients to support tissue development for healthy hips and joints in large and giant breed puppies.

### Support for Joint & Skeletal Health

TLC includes glucosamine (500 ppm), chondroitin (200 ppm), and DHA to support healthy hips and joints.

Many lack ingredients for optimal digestion and cardiovascular health, leading to poor nutrient absorption and strain the heart of growing large breed puppies.

### Heart & Digestive Health

Enriched with Omega-3 (0.25%), including DHA, and Omega-6 (2.5%) fatty acids to support cardiovascular function, fiber-rich ingredients and pre & probiotics for optimal digestion.

DMB\* = Dry Matter Basis
